She Kills Monsters Qui Nguyen, 2016 Revised 2016 Edition. *She Kills Monsters* tells the story of Agnes Evans as she leaves her childhood home in Ohio following the death of her teenage sister, Tilly. When Agnes finds Tilly's Dungeons & Dragons notebook, however, she finds herself catapulted into a journey of discovery and action-packed adventure in the imaginary world that was her sister's refuge. In this high-octane dramatic comedy laden with homicidal fairies, nasty ogres, and '90s pop culture, acclaimed playwright Qui Nguyen offers a heart-pounding homage to the geek and warrior within us all.

Technologies of Human Rights Representation Alexandra S. Moore, James Dawes, 2022-02-01 The speed of technological development, from cell phones to artificial intelligence, opens up exciting new opportunities for promoting human flourishing. It also raises grave risks, threatening not only personal privacy and dignity but also our collective survival. *Technologies of Human Rights Representation* brings together three fields of research critical to securing our future: changing technologies, human rights, and representation. For each of these fields, this book asks key questions: How can we open the black box of technological advances so that we can more fully understand their effects upon our lives? What can we do to make sure that these effects align with the values of human rights? And how does the way we talk about technology and rights—from military reports and corporate marketing to human rights reports and poetry—amplify or diminish our capacity both to understand and to control what happens next? Contributors from anthropology, communications, criminology, global studies, law, literary and cultural studies, and women and gender studies bring diverse methodological approaches to these crucial questions.

The Sonic Color Line Jennifer Lynn Stoeber, 2016-11-15 The unheard history of how race and racism are constructed from sound and maintained through the listening ear. Race is a visual phenomenon, the ability to see "difference." At least that is what conventional wisdom has led us to believe. Yet, *The Sonic Color Line* argues that American ideologies of white supremacy are just as dependent on what we hear—voices, musical taste, volume—as they are on skin color or hair texture. Reinforcing compelling new ideas about the relationship between race and sound with meticulous historical research, Jennifer Lynn Stoeber helps us to better understand how sound and listening not only register the racial politics of our world, but actively produce them. Through analysis of the historical traces of sounds of African American performers, Stoeber

reveals a host of racialized aural representations operating at the level of the unseen—the sonic color line—and exposes the racialized listening practices she figures as “the listening ear.” Using an innovative multimedia archive spanning 100 years of American history (1845-1945) and several artistic genres—the slave narrative, opera, the novel, so-called “dialect stories,” folk and blues, early sound cinema, and radio drama—The Sonic Color Line explores how black thinkers conceived the cultural politics of listening at work during slavery, Reconstruction, and Jim Crow. By amplifying Harriet Jacobs, Frederick Douglass, Elizabeth Taylor Greenfield, Charles Chesnutt, The Fisk Jubilee Singers, Ann Petry, W.E.B. Du Bois, and Lena Horne as agents and theorists of sound, Stoeber provides a new perspective on key canonical works in African American literary history. In the process, she radically revises the established historiography of sound studies. The Sonic Color Line sounds out how Americans have created, heard, and resisted “race,” so that we may hear our contemporary world differently.

The Sun, Stars, and Galaxies Britannica Educational Publishing, 2011-05-01 Most avid sky gazers wait until nightfall to catch a glimpse of the stars that are scattered across the heavens. The fact of the matter is that one needs only to feel the Sun’s rays in order to experience the presence of a star. The Sun is an ordinary star, a ball of hot gas much like millions of others in the universe, but as the center of the solar system, it is critical to the survival of all life forms on Earth. This comprehensive volume examines the nature of the Sun and details the properties and types of various stars, as well as the greater galaxies of which they are a part.

Muddied Waters Nancy P. Appelbaum, 2003-04-07 Colombia’s western Coffee Region is renowned for the whiteness of its inhabitants, who are often described as respectable pioneer families who domesticated a wild frontier and planted coffee on the forested slopes of the Andes. Some local inhabitants, however, tell a different tale—of white migrants rapaciously usurping the lands of indigenous and black communities. Muddied Waters examines both of these legends, showing how local communities, settlers, speculators, and politicians struggled over jurisdictional boundaries and the privatization of communal lands in the creation of the Coffee Region. Viewing the emergence of this region from the perspective of Riosucio, a

multiracial town within it, Nancy P. Appelbaum reveals the contingent and contested nature of Colombia's racialized regional identities. Nineteenth- and twentieth-century Colombian elite intellectuals, Appelbaum contends, mapped race onto their mountainous topography by defining regions in racial terms. They privileged certain places and inhabitants as white and modern and denigrated others as racially inferior and backward. Inhabitants of Riosucio, however, elaborated local narratives about their mestizo and indigenous identities that contested the white mystique of the Coffee Region. Ongoing violent conflicts over land and politics, Appelbaum finds, continue to shape local debates over history and identity. Drawing on archival and published sources complemented by oral history, *Muddied Waters* vividly illustrates the relationship of mythmaking and racial inequality to regionalism and frontier colonization in postcolonial Latin America.

Creation Stories Anthony Aveni, 2021-04-20 An accessible exploration of how diverse cultures have explained humanity's origins through narratives about the natural environment Drawing from a vast array of creation myths-- Babylonian, Greek, Aztec, Maya, Inca, Chinese, Hindu, Navajo, Polynesian, African, Norse, Inuit, and more--this short, illustrated book uncovers both the similarities and differences in our attempts to explain the universe. Anthony Aveni, an award-winning author and professor of astronomy and anthropology, examines the ways various cultures around the world have attempted to explain our origins, and what roles the natural environment plays in shaping these narratives. The book also celebrates the audacity of the human imagination. Whether the first humans emerged from a cave, as in the Inca myths, or from bamboo stems, as the Bantu people of Africa believed, or whether the universe is simply the result of Vishnu's cyclical inhales and exhales, each of these fascinating stories reflects a deeper understanding of the culture it arose from as well as its place in the larger human narrative.

A Modern Approach to Quantum Mechanics John S. Townsend, 2000 Inspired by Richard Feynman and J.J. Sakurai, *A Modern Approach to Quantum Mechanics* allows lecturers to expose their undergraduates to Feynman's approach to quantum mechanics while simultaneously giving them a textbook that is well-ordered, logical and pedagogically sound. This book covers all the topics that are typically presented in a standard upper-level course in quantum mechanics, but its teaching approach is new. Rather than organizing his book according to the historical development of the field and jumping into a mathematical discussion of wave mechanics, Townsend begins his book with the quantum mechanics of spin. Thus, the first five chapters of the book succeed in laying out the fundamentals of quantum mechanics with little or no wave mechanics, so the physics is not obscured by mathematics. Starting with spin systems it gives students straightforward examples of the structure of quantum mechanics. When wave mechanics is introduced later, students should perceive it correctly as only one aspect of quantum mechanics and not the core of the subject.

Managing Diversity in Organizations Barbara Beham, Caroline Straub, Joachim Schwalbach, 2013-07-10 Diversity management has recently attracted a lot of attention in both academia and practice. Globalization, migration, demographic changes, low fertility rates, a scarce pool of qualified labor, and women entering the workforce in large scales have led to an increasingly heterogeneous workforce in the past twenty years. In response to those ongoing changes, organizations have started to create work environments which address the needs and respond to the opportunities of a diverse workforce. The implementation of diversity policies and practices and the creation of an organizational culture that values heterogeneity have been the focus of recent organizational initiatives. This special issue aims at shedding light on some of open research questions by including both theoretical and empirical contributions.

A Lost Lady Willa Cather, 2023-11-15 A Lost Lady is a novel by American author Willa Cather, first published in 1923. It centers on Marian Forrester, her husband Captain Daniel Forrester, and their lives in the small western town of Sweet Water, along the Transcontinental Railroad. However, it is mostly told from the perspective of a young man named Niel Herbert, as he observes the decline of both Marian and the West itself, as it shifts from a place of pioneering spirit to one of corporate exploitation. Exploring themes of social class, money, and the march of progress, A Lost Lady was praised for its vivid use of symbolism and setting, and is considered to be a major influence on the works of F. Scott Fitzgerald. It has been adapted to film twice, with a film adaptation being released in 1924, followed by a looser adaptation in 1934, starring Barbara Stanwyck. A Lost Lady begins in the small railroad town of Sweet Water, on the undeveloped Western plains. The most prominent family in the town is the Forresters, and Marian Forrester is known for her hospitality and kindness. The railroad executives frequently stop by her house and enjoy the food and comfort she offers while there on business. A young boy, Niel Herbert, frequently plays on the Forrester estate with his friend. One day, an older boy named Ivy Peters arrives, and shoots a woodpecker out of a tree. He then blinds the bird and laughs as it flies around helplessly. Niel pities the bird and tries to climb the tree to put it out of its misery, but while climbing he slips, and breaks his arm in the fall, as well as knocking himself unconscious. Ivy takes him to the Forrester house where Marian looks after him. When Niel wakes up, he's

amazed by the nice house and how sweet Marian smells. He doesn't see her much after that, but several years later he and his uncle, Judge Pommeroy, are invited to the Forrester house for dinner. There he meets Ellinger, who he will later learn is Mrs. Forrester's lover, and Constance, a young girl his age.
