Charter School Outcomes Mark Berends,Matthew G. Springer,Herbert J. Walberg,2017-09-25 Sponsored by the National Center on School Choice, a research consortium headed by Vanderbilt University, this volume examines the growth and outcomes of the charter school movement. Starting in 1992-93 when the nation's first charter school was opened in Minneapolis, the movement has now spread to 40 states and the District of Columbia and by 2005-06 enrolled 1,040,536 students in 3,613 charter schools. The purpose of this volume is to help monitor this fast-growing movement by compiling, organizing and making available some of the most rigorous and policy-relevant research on K-12 charter schools. Key features of this important new book include: Expertise - The National Center on School Choice includes internationally known scholars from the following institutions: Harvard University, Brown University, Stanford University, Brookings Institution, National Bureau of Economic Research and Northwest Evaluation Association. Cross-Disciplinary - The volume brings together material from related disciplines and methodologies that are associated with the individual and systemic effects of charter schools. Coherent Structure - Each section begins with a lengthy introduction that summarizes the themes and major findings of that section. A summarizing chapter by Mark Schneider, the Commissioner of the National Center on Educational Statistics, concludes the book. This volume is appropriate for researchers, instructors and graduate students in education policy programs and in political science and economics, as well as in-service administrators, policy makers, and providers.

Benchmarks for Science Literacy American Association for the Advancement of Science,1994-01-06 Published to glowing praise in 1990, Science for All Americans defined the science-literate American--describing the knowledge, skills, and attitudes all students should retain from their learning experience--and offered a series of recommendations for reforming our system of education in science, mathematics, and technology. Benchmarks for Science Literacy takes this one step further. Created in close consultation with a cross-section of American teachers, administrators, and scientists, Benchmarks elaborates on the recommendations to provide guidelines for what all students should know and be able to do in science, mathematics, and technology by the end of grades 2, 5, 8, and 12. These grade levels offer reasonable checkpoints for student progress toward science literacy, but do not suggest a rigid formula for teaching. Benchmarks is not a proposed curriculum, nor is it a plan for one: it is a tool educators can use as they design curricula that fit their student's needs and

meet the goals first outlined in Science for All Americans. Far from pressing for a single educational program, Project 2061 advocates a reform strategy that will lead to more curriculum diversity than is common today. IBenchmarks emerged from the work of six diverse school-district teams who were asked to rethink the K-12 curriculum and outline alternative ways of achieving science literacy for all students. These teams based their work on published research and the continuing advice of prominent educators, as well as their own teaching experience. Focusing on the understanding and interconnection of key concepts rather than rote memorization of terms and isolated facts, Benchmarks advocates building a lasting understanding of science and related fields. In a culture increasingly pervaded by science, mathematics, and technology, science literacy require habits of mind that will enable citizens to understand the world around them, make some sense of new technologies as they emerge and grow, and deal sensibly with problems that involve evidence, numbers, patterns, logical arguments, and technology--as well as the relationship of these disciplines to the arts, humanities, and vocational sciences--making science literacy relevant to all students, regardless of their career paths. If Americans are to participate in a world shaped by modern science and mathematics, a world where technological know-how will offer the keys to economic and political stability in the twenty-first century, education in these areas must become one of the nation's highest priorities. Together with Science for All Americans, Benchmarks for Science Literacy offers a bold new agenda for the future of science education in this country, one that is certain to prepare our children for life in the twenty-first century.

Patterns of Power, Grades 1-5 Jeff Anderson, Whitney La Rocca, 2017 Jeff Anderson and literacy coach Whitney La Rocca take you into primary and intermediate classrooms where students are curious about language, engage with the world around them, and notice and experiment with the conventions all writers use. Instead of chanting grammar rules or completing countless convention worksheets, we invite young writers to explore conventions as special effects devices that activate meaning. Our students study authentic texts and come to recognize these patterns of power--the essential grammar conventions that readers and writers require to make meaning. The first part of the book introduces a vibrant approach to grammar instruction and sets up what you need to immerse yourself in the Patterns of Power process, inviting students to experiment and play with language. The second part of the book offers over seventy practical, ready-to-use lessons, including: Extensive support materials Over 100 mentor sentences, curated for grades 1-5 Student work samples Tips and power notes to facilitate your own knowledge and learning Examples for application In Patterns of Power Jeff and Whitney suggest that taking just five minutes from your reading workshop and five minutes from your writing workshop to focus on how the conventions connect reading and writing will miraculously affect your students' understanding of how language works for readers and writers.
